- Basic brazing and flare-up practice
- Vacuum pump and micron gauge (supervised)
- Ladder and crawl-space work
- Hand and power tools
- Truck stocking and inventory
- Blueprint reading (basic)
- Reliable attendance, valid driver's license

Professional Experience

HVAC INSTALL APPRENTICE | REDBIRD COMFORT SYSTEMS, FORT WAYNE, IN 2024 – PRESENT

- Ride along on residential change-outs, handle equipment offload, pad setting, and old-unit teardown so the lead can start on line-set work.
- Cut and run flex duct, hang straps to code spacing, and seal collars with mastic on around 40 install days so far.
- Learned to pull vacuum and read a micron gauge under supervision, hit the 500 micron target on the last six jobs without a rebreak.
- Keep the install truck inventoried: fittings, tape, mastic, strap, filters, so the crew isn't running to supply mid-job.

GENERAL LABORER | HALSTON RESIDENTIAL BUILDERS, FORT WAYNE, IN 2023 – 2024

- Framing helper on 12 new-construction homes, got comfortable reading plans and working around other trades.
- Loaded and unloaded material trucks daily, kept the site clean, learned construction safety basics on the job.
- Picked up basic ductwork exposure watching the mechanical sub rough in supply and return trunks.
